LaTeX letters using RWTH Aachen CI

Hello,

this is a template file to show the usage of the `rwth-letter` class.

The most important options can be found within the source file of this document. Other options or layout adjustments may not comply CI regulations and therefore should not be used.

Supported options:

`raggedright=true/false` Set all text ragged right. Default setting is false and uses justified text.

`textwidth=narrow/wide` The design allows two different letter layouts. The default is narrow.

To reuse the sender's address the template provides an example `lco`-file. See the KOMA-Script documentation on details about these files and how to use them.

Happy TeXing

Prof. Dr. Kim Muster
